**Summary Prospectus**  
**September 29, 2023**  
**(as revised January 12, 2024)**

**Investment Objective**

The NEOS Enhanced Income 1-3 Month T-Bill ETF (the “Fund”) seeks to generate monthly income in a tax efficient manner.

**Fund Fees and Expenses**

The table below describes the fees and expenses that you pay if you buy, sell, and hold shares of the Fund (“Shares”). Future expenses may be greater or less. You may be required to pay brokerage commissions on purchases and sales of Shares, which are not reflected in the tables or the example below. Please contact your financial intermediary about whether such a commission may apply to your transactions.

<b>Shareholder Fees</b> (fees paid directly from your investment)	None
<b>Annual Fund Operating Expenses</b> (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.38%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
<b>Total Annual Fund Operating Expenses</b>	<b>0.38%</b>

**Example**

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<b>Year</b>	<b>Expenses</b>
1	\$39
3	\$122
5	\$213
10	\$480

**Portfolio Turnover**

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may result in higher transaction costs and higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses table or in the Example above, may affect the Fund’s performance. For the fiscal period ended May 31, 2023, the Fund’s portfolio turnover rate was 0% of the average value of its portfolio.

## Principal Investment Strategies of the Fund

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by (i) investing in 1-3 month T-Bills or in ETFs with substantial exposure to 1-3 month T-Bills (collectively, the “Underlying Investments”) and (ii) selling and purchasing S&P 500® Index put options (“SPX put options”) to generate income to the Fund beyond what is received from the Underlying Investments.

The Fund’s option strategy seeks to generate monthly income for the Fund in addition to the yield it receives from the Underlying Investments. The options strategy utilizes a “put spread” consisting of the sale of exchange listed put options (“Short Puts”) with a notional value up to 100% of the Fund’s net assets and the purchase of put options (“Long Puts”). The Fund’s adviser, NEOS Investment Management, LLC (the “Adviser”) may actively manage the written and purchased SPX put options prior to expiration to potentially capture gains and minimize losses due to the movement of the S&P 500® Index. The SPX options strategy is intended to generate high monthly income in a tax efficient manner. The Fund seeks tax efficient returns by utilizing index options that receive favorable tax treatment under Internal Revenue Code rules because they qualify as “Section 1256 Contracts.” Under these rules, each section 1256 contract held by the Fund at year end is treated as if it were sold at fair market value on the last business day of the tax year. If the Section 1256 contracts produce capital gain or loss, gains or losses on the Section 1256 contracts open at the end of the year, or terminated during the year, are treated as 60% long term and 40% short term, regardless of how long the contracts were held. In addition, the Fund may seek to take advantage of tax loss harvesting opportunities by taking investment losses from certain equity and/or options positions to offset realized taxable gains of equities and/or options. Opportunistically, the Fund may seek to take advantage of tax loss harvesting opportunities on the SPX put options.

The Fund focuses primarily on SPX put options which offer both European settlement (i.e., options can only be exercised at their expiration date) and cash settlement (i.e., options carry an obligation by their seller to pay the difference between their strike price and their settlement value instead of allowing the seller to take delivery of securities).

The Fund invests under normal circumstances at least 80% of its assets in 1-3 month T-Bills, which may be represented by ETFs that invest 80% or more of their assets in US 1-3 month T-Bills, and forwards, options, futures contracts or swap agreements related to such bills. For purposes of the 80% policy, the value of such options, futures contracts and swap agreements shall be determined on a daily mark-to-market basis.

The Fund’s options strategy is designed to seek to generate a positive return in rising and flat equity markets and may generate a positive return in equity markets that are modestly declining, assuming the net premium collected from the options sold and purchased exceeds the net cost to close the positions.

The average portfolio duration of the Fund will vary based on the Adviser's market forecasts and is expected to be 3-months. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Fund may engage in active and frequent trading of portfolio securities in implementing its principal investment strategies.

### **Principal Risks of Investing in the Fund**

*There is no assurance that the Fund will meet its investment objective. The value of your investment in the Fund, as well as the amount of return you receive on your investment in the Fund, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Therefore, you should consider carefully the following risks before investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency.*

*Absence of Prior Active Market Risk.* While the Fund's Shares are listed on NYSE Arca, Inc. (the "Exchange"), there can be no assurance that an active trading market for Shares will develop or be maintained. The Fund's distributor does not maintain a secondary market in Shares.

*Active Management Risk.* The Fund is actively managed, which means that investment decisions are made based on investment views. There is no guarantee that the investment views will produce the desired results or expected returns, which may cause the Fund to fail to meet its investment objective or to underperform its benchmark index or funds with similar investment objectives and strategies. Furthermore, active trading that can accompany active management may result in high portfolio turnover, which may have a negative impact on performance. Active trading may result in higher brokerage costs or mark-up charges, which are ultimately passed on to shareholders of the Fund. Active trading may also result in adverse tax consequences.

*Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

*Derivatives Risk.* The Fund's use of derivatives may reduce the Fund's returns or increase volatility. Volatility is defined as the characteristic of a security, an index or a market to fluctuate significantly in price within a short time period. Derivatives may also be subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligation. Counterparty risk for over-the-counter ("OTC") derivatives is generally higher than that for derivatives traded on an exchange or through a clearing house. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the value of the underlying asset, the performance of the asset class to which the Fund seeks exposure or the performance of the overall markets. The possible lack of a liquid secondary market for derivatives and the resulting inability of the Fund to sell or otherwise close a derivatives position could expose the Fund to losses and could make derivatives more difficult for the Fund to value accurately. The Fund could also suffer losses related to its derivatives positions as a result of unanticipated market movements, or movements between the time of periodic reallocations of Fund assets, which losses are potentially unlimited. Certain derivatives may give rise to a form of leverage and may expose the Fund to greater risk and increase its costs. The impact of U.S. and global regulation of derivatives may make derivatives more costly, may limit the availability of derivatives, may delay or restrict the exercise by the Fund of termination rights or remedies upon a counterparty default under derivatives held by the Fund (which could result in losses), or may otherwise adversely affect the value or performance of derivatives.

*Forward Contract Risk.* Forward contracts involve the purchase or sale of a specific quantity of a government security at a specified price, with delivery and settlement at a specified future date. Forward contracts, unlike futures contracts, are not traded on exchanges and are not standardized; rather, banks and dealers act as principals in these markets, negotiating each transaction on an individual basis. The principals who deal in the forward markets are not required to continue to make markets in the currencies or commodities they trade and these markets can experience periods of illiquidity, sometimes of significant duration. There have been periods during which certain participants in these markets have refused to quote prices for certain currencies or commodities or have quoted prices with an unusually wide spread between the price at which they were prepared to buy and that at which they were prepared to sell.

*Futures Contract Risk.* Futures are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. Unlike equities, which typically entitle the holder to a continuing ownership stake in an issuer, futures contracts normally specify a certain date for settlement in cash based on the level of the reference rate. The primary risks associated with the use of futures contracts, or swaps or other derivatives referencing futures contracts, are: (i) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (ii) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (iii) losses caused by unanticipated market movements, which are potentially unlimited; (iv) the Adviser's inability to predict correctly the direction of prices and other economic factors; and (v) the possibility that the counterparty will default in the performance of its obligations.

*Income Risk.* The Fund's income may decline when yields fall. This decline can occur because the Fund may subsequently invest in lower-yielding bonds as bonds in its portfolio mature, are near maturity or are called, bonds in the Fund otherwise needs to purchase additional bonds.

*Interest Rate Risk.* An increase in interest rates may cause the value of fixed-income securities held by the Fund or the Underlying Investments to decline. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.

*Large Shareholder and Large-Scale Redemption Risk.* Certain shareholders, including an Authorized Participant, a third-party investor, the Fund's adviser or an affiliate of the Fund's adviser, a market maker, or another entity, may from time to time own or manage a substantial amount of Fund shares, or may invest in the Fund and hold its investment for a limited period of time. There can be no assurance that any large shareholder or large group of shareholders would not redeem their investment. Redemptions of a large number of Fund shares could require the Fund to dispose of assets to meet the redemption requests, which can accelerate the realization of taxable income and/or capital gains and cause the Fund to make taxable distributions to its shareholders earlier than the Fund otherwise would have. In addition, under certain circumstances, non-redeeming shareholders may be treated as receiving a disproportionately large taxable distribution during or with respect to such year.

*Market Risk.* The prices of securities held by the Fund may decline in response to certain events taking place around the world, including those directly involving the companies whose securities are owned by the Fund; conditions affecting the general economy; overall market changes; local, regional or global political, social or economic instability; and currency, interest rate and commodity price fluctuations. The equity securities purchased by the Fund may involve large price swings and potential for loss. Investors in the Fund should have a long-term perspective and be able to tolerate potentially sharp declines in value. The market's daily movements, sometimes called volatility, may be greater or less depending on the types of securities the Fund owns and the markets in which the securities trade. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, war, terrorism, regulatory events, governmental or quasi-governmental actions, and public health emergencies. The occurrence of global events similar to those in recent years, such as terrorist attacks around the world, natural disasters, social and political discord or debt crises and downgrades, among others, may result in market volatility and may have long term effects on both the U.S. and global financial markets.

*Market Trading Risk.* The Fund faces numerous market trading risks, including disruptions to the creation and redemption processes of the Fund, losses from trading in secondary markets, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. The NAV of Shares will fluctuate with changes in the market value of the Fund's securities holdings. The market prices of Shares will fluctuate in accordance with changes in NAV and supply and demand on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. Any of these factors, discussed above and further below, may lead to Shares trading at a premium or discount to the Fund's NAV.

*New Adviser Risk.* The Adviser is both a newly registered investment adviser and has limited or no previous experience managing a registered fund. As a result, there is no long-term track record against which an investor may judge the Adviser and it is possible the Adviser may not achieve the Fund's intended investment objective.

*Options Risk.* There are risks associated with the sale and purchase of put options. As a seller (writer) of a put option, the Fund will tend to lose money if the value of the reference index or security falls below the strike price. As the buyer of a put option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.

*Pandemics Risk.* An outbreak of infectious respiratory illness caused by the novel coronavirus known as COVID-19 was first detected in China in December 2019 before spreading worldwide and being declared a global pandemic by the World Health Organization in March 2020. COVID-19 has resulted in travel restrictions, closed international borders, enhanced health screenings, disruption and delays in healthcare services, prolonged quarantines, cancellations, temporary store closures, social distancing, government ordered curfews and business closures, disruptions to supply chains and consumer activity, shortages, highly volatile financial markets, and general concern and uncertainty.

*Portfolio Turnover Risk.* Due to its investment strategy, the Fund may buy and sell securities frequently. This may result in higher transaction costs and additional capital gains tax liabilities, which may affect the Fund's performance.

*Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

*Tax Risk.* The Fund invests in derivatives. The federal income tax treatment of a derivative may not be as favorable as a direct investment in an underlying asset. Derivatives may produce taxable income and taxable realized gain. Derivatives may adversely affect the timing, character and amount of income the Fund realizes from its investments. As a result, a larger portion of the Fund's distributions may be treated as ordinary income rather than as capital gains. In addition, certain derivatives are subject to mark-to-market or straddle provisions of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"). If such provisions are applicable, there could be an increase (or decrease) in the amount of taxable dividends paid by the Fund.

*Underlying ETF Risk.* The Fund will have exposure to underlying ETFs that track their respective indexes. Because the value of the Fund in part will be based on the value of the Underlying ETF, the Fund's investment performance depends on the investment performance and associated risks of the Underlying ETFs. The Underlying ETFs are subject to many of the same structural risks as the Fund that are described in more detail herein, such as Authorized Participant Concentration Risk, Equity Securities Risk, Fluctuation of Net Asset Value Risk, Market Maker Risk, Market Risk, Operational Risk and Trading Issues Risk.

*U.S. Government Securities Risk.* U.S. government securities may differ from other securities in their interest rates, maturities, times of issuance and other characteristics and may provide relatively lower returns than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund's U.S. government securities to decline.

*Valuation Risk.* The price the Fund could receive upon the sale of a security or other asset may differ from the Fund's valuation of the security or other asset, particularly for securities or other assets that trade in low volume or volatile markets or that are valued using a fair value methodology as a result of trade suspensions or for other reasons. In addition, the value of the securities or other assets in the Fund's portfolio may change on days or during time periods when shareholders will not be able to purchase or sell the Fund's shares. Authorized Participants who purchase or redeem Fund shares on days when the Fund is holding fair-valued securities may receive fewer or more shares, or lower or higher redemption proceeds, than they would have received had the Fund not fair-valued securities or used a different valuation methodology. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

## **Performance**

Because the Fund does not have a full calendar year of performance as of the date of this Prospectus, no performance information for the Fund has been provided.

## **Management**

### *Investment Adviser*

NEOS Investment Management, LLC

### **Portfolio Manager Bio**

Garrett Paoella, Managing Partner and Portfolio Manager of the Adviser

Troy Cates, Managing Partner and Portfolio Manager of the Adviser

Ryan Houlton, Managing Director, Head of Trading and Portfolio Manager of the Adviser

## **Purchase and Sale of Fund Shares**

### Authorized Participants

The Fund issues and redeems Shares at NAV only in a large, specified number of Shares each called a “Creation Unit,” or multiples thereof, and only with authorized participants (“Authorized Participants”) which have entered into contractual arrangements with the Fund’s distributor (“Distributor”). Creation Unit transactions are typically conducted in exchange for a portfolio of securities closely approximating the holdings of the Fund and/or cash.

### Investors

Individual Shares of the Fund may only be purchased and sold on a national securities exchange through brokers. Shares of the Fund are listed on the Exchange and because Shares will trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

## **Tax Information**

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

## **Payments to Broker-Dealer and Other Financial Intermediaries**

If you purchase Shares through a broker-dealer or other financial intermediary, the Adviser or other related companies may pay the intermediary for the sale of Shares or related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
